

Introduction to Trackuback

This is a short text guide to the first steps inside Trackuback. In the beginning, we recommend that you start with some basic tools.

1. In the Main menu, click 'Orientation', for quick info, and short guide videos to help you understand the platform. Then click 'Settings' to choose language, graphics, deleting and uploading gedcom data, and much more.

2. Navigate the family tree: Move, zoom and switch between different trees. Try the Time view for new perspectives.

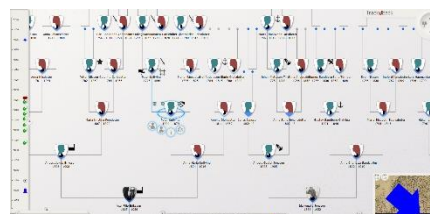

3. Open the timeline- and map menus, to find historical maps, fact layers and events.

4. Click the persons in the tree, have a look at the info card. Review and input dates and place names for your ancestors. That will make the timeline and eventually the map visualize your ancestors.

5. We recommend that you geocode your geographic places early, to get the most out of the map.

After these first steps, you can continue to build your family history by editing and adding your content.
